Section II

Question 21 (a)

Criteria	Marks
• States what data redundancy is and provides an example	2
• Identifies a feature of data redundancy	1

Sample answer:

Data redundancy is the unnecessary repetition or duplication of data within a database. For example, including names of parents in a student table may introduce data redundancy if there are siblings in the same school.

Question 21 (b) (i)

Criteria	Marks
• Identifies data types and field sizes for Phone_Number and Deposit_Paid with justifications for data types	3
• Provides all required details for Phone_Number or Deposit_Paid OR • Identifies data types and/or field sizes for Phone_Number and Deposit_Paid	2
• Identifies a data type or field size	1

Sample answer:

Field name	*Data type*	*Field size*	*Justification for choice of data type*
Phone_Number	Number	10	It is easier to search this field as a numeric field rather than text
Deposit_Paid	Boolean	1	Boolean is an appropriate data type as this is a yes (Y) or no (N) type of answer.
